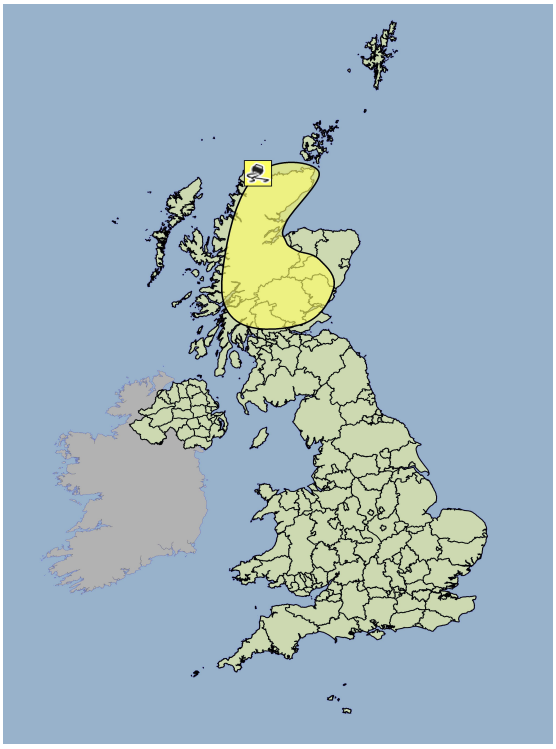
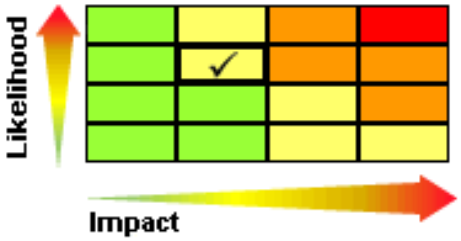
National Severe Weather Warning Service





Chief Forecasters Assessment
An unstable polar airstream will spread back across Scotland on Saturday evening and overnight, bringing squally wintry showers well inland across Scotland. Roads and pavements in western coastal fringes and the Western Isles should stay largely above zero (except at high elevation), while some northeastern areas see relatively few showers. Elsewhere the risk of ice is higher, exacerbated by the possibility of treatment being washed off by rain and sleet showers before freezing.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **21:00 on Sat, 28th Nov 2015** until **10:00 on Sun, 29th Nov 2015**

Frequent wintry showers and falling temperatures, (along with pre-existing wet surfaces in areas which have seen a lot of rainfall on Saturday), are likely to lead to some icy surfaces on Saturday evening and overnight into Sunday morning. Higher level routes may also be affected by accumulations of a few cm of snow.

Please be aware of the need to take extra care when traveling, with the possibility of localised minor travel disruption.
